London Borough of Brent

Services

Feasibility design, technical support, SuDS design.

Green & Healthy School Streets

The London Borough of Brent has been rolling out a series of school streets and they wanted to activate those projects through their “Green & Healthy School Streets” programme.

We joined lead consultant MP Smarter Travel together with landscape architecture consultants ONE-Environments to deliver a series of proposals for four school streets in Brent which would have sustainable drainage systems (SuDS) at their hearts.

MP Smarter worked with the children at key schools to set a vision for their school street and we provided the technical expertise to develop a series of

design options to introduce SuDS to the streets as well as opportunities for decluttering, adding cycle parking and seating. We then developed a set of preliminary designs for each school street utilising a wealth of design guidance.

We also worked with ONE-Environments to provide SuDS features of a useful and meaningful layout to support bespoke planting schemes.

A closing report was provided for each of the four school streets and we provided technical insight on design, maintenance, capital investment costs and health & safety considerations.
