

Client

The Isle of Wight Council.

Services

Network design, feasibility design, technical support.

Island Green Links

We were commissioned by the Isle of Wight Council to provide technical support for a section of the Island Green Link between Gunville and Newport which is being delivered through the Levelling Up Fund.

The work included the development of a network-level design approach to change the character of local rural roads in the area to the north-west of Gunville for suitability as walking and cycling streets, off-road connections and feasibility design work for parts of the route including key road crossings.

Rural road network-level design option for the north-west of Gunville.

In addition, the work also developed options for improving parts of the local public footpath network to meet a standard for all weather walking and wheeling access in accordance with the council's general approach across the Island.

We also provided technical and design services for the improvement of a section of the National Cycle Network across Newport town centre to provide local access and onward connections to other parts of the Island. The work included developing route options, concept designs and evaluation of options.
