

## Client

London Borough of Brent

## Services

Feasibility and detailed design, technical support, and qualitative surveys and assessment.

# School Streets

School Streets are a progression of town centre pedestrian zones which have operated in the UK for decades, but these tend to operate for a short period of time during the morning school dropping off and afternoon picking up times.

We have been working in partnership with MP Smarter Travel supporting the London Borough of Brent in the roll-out of its school street programme.

We have provided a range of services for the programme including undertaking qualitative site surveys and assessments before and after schemes were deployed, including area expansions and provision of advice on mitigations.

We also provided feasibility and detailed design services for a range of different scheme locations, including site prioritisation and base plans for public engagement.

We used our extensive experience of traffic management orders, the Traffic Signs Regulations & General Directions and the Traffic Signs Manual to develop designs which were logical and could easily be included within the council's traffic order processes.

The photograph is near Mount Stewart School where we advised on an expansion to a small school street, undertook the design work and helped with a post installation assessment.
